EDUCATION

ITM University

Bachelor of Engineering in Artificial Intelligence and Machine Learning

Gwalior, Madhya Pradesh

Aug. 2023 – Jul. 2027

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, Java, C, SQL

AI/ML & Computer Vision: OpenCV, MediaPipe, TensorFlow, NumPy, Pandas, Face Recognition, Gesture Recognition

IoT & Embedded Systems: ESP32, Embedded C, Sensor Integration, Wireless Communication, Real-Time Device Control

Developer Tools: Git, GitHub, Docker, Postman, VS Code

Core Skills: Artificial Intelligence, Computer Vision, IoT Systems, Backend Development, Real-Time Systems

EXPERIENCE

AI/ML & IoT Developer Intern

STARK-IT Solutions Pvt Ltd

Jun. 2025 – Jan. 2026

Remote

- Built AI-integrated systems, REST APIs, and computer vision workflows for real-time applications.
- Implemented the Apriori algorithm to generate personalized product recommendations, increasing user engagement and improving product discovery workflows.

Freelance AI/IoT Developer

ACT, Highchem, Smazzkart

2023 – 2025

Remote

- Delivered 5+ AI-powered applications, IoT systems, and scalable backend solutions for startups.
- Developed secure APIs, real-time communication workflows, and automation systems to improve operational efficiency.

PROJECTS

gestureBot – AI Gesture Controlled Robot | *OpenCV, MediaPipe, ESP32, L298N*

- Built a real-time AI gesture-controlled robotic car using ESP32 and computer vision workflows.
- Trained a custom dataset with 100+ gesture samples and achieved 60 FPS low-latency gesture recognition.
- Implemented gesture-to-command control workflows, improving interaction accuracy and driving responsiveness.

Smart Thermal Printer Device | *ESP32, Embedded C, IoT*

- Developed a wireless thermal printer bridge enabling driver-free printing from any device over local networks.
- Built an ESP32-hosted dashboard for real-time template editing, print management, and device configuration.
- Reduced printer setup complexity and improved portability across multiple devices and operating systems.

Smart Biometric Door Lock System | *ESP32, IoT, Embedded Systems*

- Developed a biometric access control system with real-time authentication and wireless security workflows.
- Integrated sensor-driven authentication pipelines for secure smart access management.

AI Attendance Monitoring System | *Python, OpenCV, Face Recognition*

- Built an AI-powered attendance monitoring system with automated real-time face recognition workflows.
- Optimized identity verification pipelines for improved recognition accuracy under varying conditions.

ACHIEVEMENTS & CERTIFICATIONS

Leadership: Co-organized AI Odyssey, a 36-hour AI hackathon at ITM University with 200+ participants, managing technical operations and logistics.

Competition: Secured Runner-Up position at PUCode Hackathon by developing a full-stack event management platform within 48 hours.

Certifications: AWS Certified in Artificial Intelligence and Machine Learning (AI/ML): [Link](#)
AWS certified in Internet of things (IoT) Microcontrollers: [Link](#)
